

Voting Technologies International in the News – A Partial List of Documented Failures

"A common practice for local election officials is to let election companies run their election — make up their ballot, set up their machines, and even count their tallies. This is a dangerous practice." ~ Ted Selker, Cal Tech/MIT Voting Technology Project.¹

| May 2006 | VOTEWARE touch screen | <p>Randolph County, Indiana. Problems plague the county's first use of the VTI system. Data was lost in two precincts when two machines are turned off improperly. Votes had to be retrieved by company technicians. And reports of the totals were unusable.²</p> <p>But when Randolph County printed the report from its first completed precinct -- Winchester 1 -- the report was 112 pages long and it took 20 minutes to print. And quite frankly, it didn't make sense to the naked eye. Races weren't listed in the typical order -- with federal and state races above county, township and school board contests -- and most appeared to be repeated several times in the report, with absentee votes mingled in, even though they weren't supposed to be.</p> <p>[County Clerk Claudia] Thornburg said she doesn't understand the technical problems, but that's what VTI will hope to figure out today, and ultimately solve before the November general election.</p> <p>"All I know is it crashed," she said.</p> |
| May 2006 | VOTEWARE touch screen | <p>Indiana. Problems surfaced in the other three counties using the VTI system.³</p> <p>Cass County Clerk Linda Crimmins said she was missing a report from a single precinct. Boone County Clerk Lisa Garoffolo said disks at 13 of the county's 29 polling locations didn't retrieve complete data at the end of the 12-hour election day, but staff had paper printouts from each location as backups. Staff used those papers to calculate totals, Garoffolo said. The Indianapolis Star reported that VTI blamed the election night malfunctions in Boone County on "incomplete training of election workers."</p> <p>In Parke County, a deputy clerk said the county was still waiting on "official numbers" after its first election using the new voting machines.</p> <p>A phone call to VTI's headquarters in Milwaukee went unanswered late Wednesday afternoon.</p> |

Voting Technologies International in the News – A Partial List of Documented Failures

| Date | Subject | Place/Description |
|----------|-----------------------|--|
| May 2006 | VOTEWARE touch screen | <p>Parke County, Indiana The County Clerk would not release election results because of problems related to “glitches” in the new voting systems, and said a recount was necessary.⁴ The clerk expected the vendor, Vote Technologies International to send a technician to help with a recount. Voters had complained of long lines causing some voters to wait over two hours.</p> <p>Clerk Sue Ann Woody declined to release election results Wednesday; she said a recount was necessary because of technical glitches.</p> <p>“We need to have a recount to make sure we have the right numbers” before they are certified, Woody said. “I’m not sure if it’s accurate. We’ll call technicians back and recheck this.”</p> <p>...The county used computerized, touch-screen voting machines for the first time this year. On Tuesday night, voters described numerous problems with machine malfunctions that caused long lines and prompted some voters to wait up to two hours to vote.</p> |
